Since 1972, Pilgrim has been producing enough electricity to power more than 600,000 homes.

Like all U.S. nuclear plants, Pilgrim is regulated by the U.S. Nuclear Regulatory Commission (NRC). Two NRC resident inspectors are assigned to Pilgrim full-time.

Produce electricity with virtually no greenhouse gas emissions.

Pilgrim provides 84 percent of the greenhouse gas free electric generation in the Commonwealth.

Compared to a natural gas plant, Pilgrim prevents the production of approximately 1.6 million tons of greenhouse gases, 153 tons of nitrogen oxides, and 48 tons of sulfur dioxide emissions each year.

Pilgrim provides 680 megawatts of safe, clean, vital energy to Massachusetts. Nuclear energy is a price-stable source and does not fluctuate like natural gas prices or other fossil fuels.

Entergy has invested over half a billion dollars in Pilgrim since it purchased the plant in 1999 to enhance safety and reliability.

Pilgrim produces 84 percent of the greenhouse gas free electric generation in the Commonwealth.

Compared to a natural gas plant, Pilgrim prevents the production of approximately 1.6 million tons of greenhouse gases, 153 tons of nitrogen oxides, and 48 tons of sulfur dioxide emissions each year.

Pilgrim provides 600 highly skilled full-time jobs for men and women in the area, plus another 900 specialty jobs during refueling outages.

Pilgrim’s annual payroll totals $55 million and the plant pays $9.75 million to Plymouth as payment in lieu of taxes. Pilgrim makes a total economic impact of $145 million to the area.

Independent inspectors from the NRC spend about 8,000 hours each year reviewing safety performance at Pilgrim.

Each year, Entergy and Pilgrim employees provide over $300,000 in charitable contributions to community events and non-profit organizations.
